(54) **Mass spectrometer and mass spectrometry for analysing compounds contained in a solution**

(57) A mass spectrometer employing an ion source (6) includes a capillary (2) for spraying therethrough liquid into the atmosphere, and an orifice (3) through which a portion in the vicinity of a tip of the capillary is inserted, the orifice being designed in such a way that gases are caused to flow up to the tip of the capillary along a peripheral wall face of the capillary. The flow rate of gas in the vicinity of the tip of the capillary is about the sonic velocity, and a voltage is applied across the liquid flowing through the capillary and the orifice or an electrode (9, 12) arranged in the vicinity of the tip of the capillary.

CLAIMS INCURRING FEES

The present European patent application comprised at the time of filing more than ten claims.

- ☐ All claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for all claims.
- ☐ Only part of the claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims and for those claims for which claims fees have been paid,
namely claims:
- ☐ No claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims.

LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirement of unity of invention and relates to several inventions or groups of inventions,
namely:

see sheet -B-

- ☐ All further search fees have been paid within the fixed time limit. The present European search report has been drawn up for all claims.
- ☐ Only part of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the inventions in respect of which search fees have been paid,
namely claims:
- ☒ None of the further search fees has been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the invention first mentioned in the claims,
namely claims: 1, 6-31

European Patent Office

EP 96 11 4339 - B -

LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirement of unity of invention and relates to several inventions, or groups of inventions, namely:

1. Claims 1,6-31 : Device for ionizing a sample in a mass spectrometer consisting of a capillary tube with an insulating tip "the part of said capillary through which the solution is caused to flow" being grounded.
2. Claims 2-5 : Device for ionising a sample in a mass spectrometer, comprising a capillary from which the sample is discharged by assistance of a gas flow and a power source to generate a voltage applied to the sample.
3. Claims 32-36 : Device for ionizing a sample in a mass spectrometer, characterized in that multiply charged ions are produced by spraying a solution containing the sample in an uniform electric field.
